

Be ready for easy cargo flow through Europe

Our warehouse facility in Bremerhaven connects you to critical markets and lets you go **all the way** effortlessly.

Access European markets with **ease**

Moving your goods through the Bremerhaven port is now easier on several counts, thanks to our integrated warehouse facility located close to the deep-sea terminal.

This pit-stop lets you respond quickly to shifting market trends by scaling up or down when needed. With faster customs clearances, it also supports easy forward movement of your cargo.

Find out how every major European market is now comfortably within reach.

How it works to your advantage

Strategic location

The warehousing facility is located near the deep-sea terminal in Bremerhaven and has direct access to the German highway network, ensuring fast access to the markets.

Warehouse specifications

The facility comprises multi-purpose warehousing spaces, a mezzanine, an office and social areas.

76,580 sq. m of warehousing space

5 levels of wide-aisle racking

87,360 pallet positions

64 dock doors

GHG reduction features

Our Bremerhaven facility has achieved a 'Gold' certification by the DGNB standard, which aligns with our aim to support decarbonisation efforts. Key features of the facility include:

 Powered by solar panels on the roof

 Heating through fully electric pumps

 Provision for charging e-trucks

Secure facility

The warehouse meets TAPA A security standards, ensuring the safety and security of your goods.

Bonded warehouse

The Bremerhaven port offers faster customs clearance as the ATB number does not need to be registered, and T1 documents can be processed directly at bonded warehouses. Our facility near the Bremerhaven port offers a bonded storage option that can be utilised in case of operational delays or near-term indecisions. This way, you can defer import taxes on your goods at the freeport until their destination has been decided and you are ready to move them inland or book them in an onward journey out of the country.

Inventory management

Our integrated Warehouse Management System (WMS) enhances operational efficiency and improves responsiveness to market needs.

Value-added services:

To minimise your go-to-market needs and keep your supply chain agile, our facility offers a range of value-added services, including sorting, labelling, co-packing, quality checks, palletizing, re-packing, and more.
