API AND EDI
SOLUTIONS GUIDE

Streamline your data across your supply chain journey with API and EDI solutions. Make faster, more accurate and easier decisions with quick accessibility to all your data points under one digitally integrated system.

File Transfer

Easy to use batch integration of pre-alert in combination with tracking files and unbranded generic barcode labels. Effortless access to multiple carrier networks without sorting and labels requirements.

Final mile label

API integration for final mile label in combination with tracking files and branded carrier specific labels.

Integration platforms

Being an integrated service provider on numerous delivery management and e-commerce software platforms, at Maersk we enable online retailers and 3PL companies to easily integrate our services. No major requirements, only a few steps to follow a set up.

1. **Account Setup:** We have several options for you to provide data, including XML format and CSV format. Choose the integration option that suits you best, and we will send you the specification to start integrating.

2. **Implementation:** We will kick off your integration together with our customer integration team and account manager. We will help you to set the implementation plan, provide test keys to access our environment, and start the implementation.

3. **Test Phase:** When the implementation phase is passed successfully, you will receive a live authentication key and you will be ready to start shipping using our services.

4. **Start Shipping:** You are now ready to start shipping!
